

AI-Driven Geospatial Insights for Your Entire Organization

Geospatial data is more abundant than ever, yet its value often remains locked behind specialized tools and knowledge. Not anymore!

GeoAgent is an intelligent geospatial assistant that's designed to understand your mission, interpret your intent, and automatically build and execute end-to-end workflows. GeoAgent automates data discovery, analysis, and the production of results, helping teams move faster, make better decisions, and scale geospatial insight across the enterprise.

The GeoAgent Approach: Agentic Reasoning, Not Just Chat

When people hear "AI" they often think of chatbots or copilots – tools that help users' complete tasks inside a single application. GeoAgent is different. A copilot helps you do the work. GeoAgent actually does the work!

GeoAgent plans and orchestrates multi-step workflows, executes analytics, adapts to conditions, and delivers mission-ready results aligned to your intent. It means users spend less time writing code and stitching tools together and more time acting on answers.

NV5

NV5 delivers comprehensive geospatial artificial intelligence (GeoAI) based on our deep and unparalleled expertise in data acquisition, analytics, and custom solutions. This background enables us to provide efficient, reliable, and cost-effective AI solutions that bring the right pieces together to help customers solve mission-critical challenges.

GeoAgent's End-to-end Capabilities

Interactive Conversational Interface

GeoAgent brings geospatial capability into a modern AI chat interface (think ChatGPT).

Orchestrate Workflows

GeoAgent interprets your prompt, determines your intent, and automatically constructs geospatial workflows on demand.

Find Data

Unlike standalone LLMs, GeoAgent understands geospatial context and can find the right data to solve the problem.

Multimodal Analysis

GeoAgent runs geospatial processing and analysis tools for data types ranging from lidar and SAR to spectral, FMV, and vector data, and converts them into tailored, meaningful outputs.

Rapid Product and Report Generation

Instantly generate vectors, annotated products, and processing summaries.

Interoperable Outputs

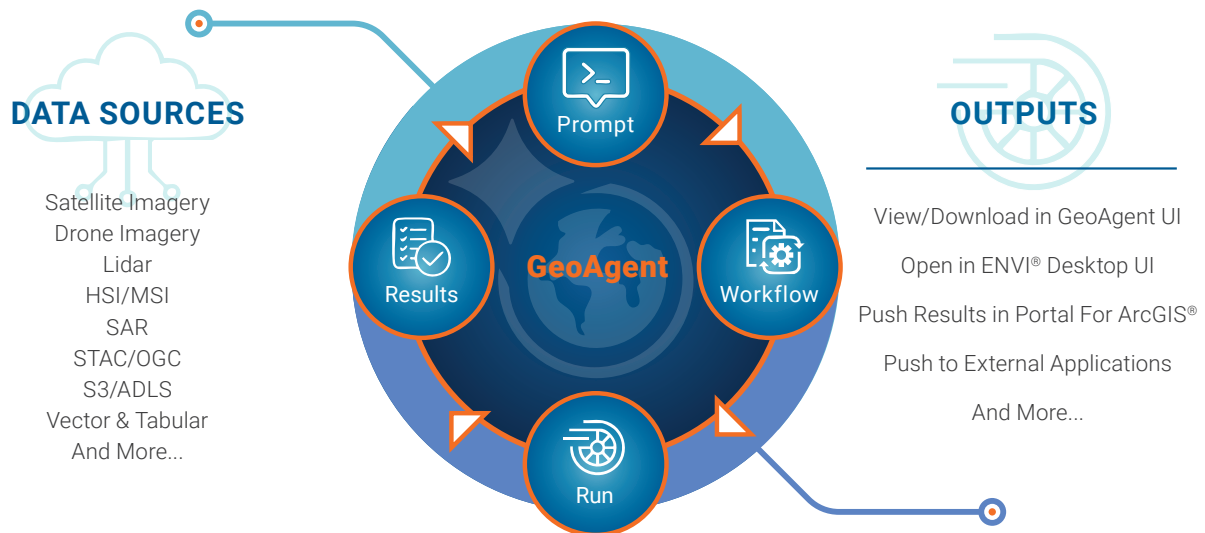

Supports and delivers outputs into GIS platforms, remote sensing tools, planning systems, and situational awareness dashboards.

Transparency

Every step is logged and reasoning and parameter choices are explained, providing full transparency.

MCP Compliant

Enables seamless orchestration across systems, tools, and data.

Built for Everyone

GeoAgent lowers the barrier of entry by guiding inputs, handling complexity behind the scenes, and explaining decisions in plain language. For experienced analysts, it accelerates work without sacrificing control by automating repetitive steps, recommending best-practice parameters, and maintaining full transparency for QA/QC and compliance.
